

## VISUAL LOGISTICS BUSINESS MANAGEMENT

### Designed to Integrate

The VLBM system part of a unique suite of web based business tools for transport operators that help unlock increased value from existing investments.

### Optimised Plan Improved

Optimised transport plans may be integrated with VLPM and auto-allocated to assets. Non-conforming work is automatically matched with all other network assets to drive improved asset utilisation and minimise empty running.

### Service Levels Improved

The plan extends seamlessly into operations, with alerts for late running and re-planning tools during the operations phase.

### Information Driven Success

KPI reports begin to flow during planning and genuine plan actual comparisons arrive before the trucks return using our unique plan to telematics link.

## The Efficient Transport Business Solution

### Web-based operational and business administration software

#### Efficiency Benefits

The VL suite of products recognises the obvious truth that transport businesses are not neatly housed in one location. At a minimum staff are split between a single office site and the road, more often in multiple sites. The smooth flow of paperwork takes time and effort. A web based system that operates in real time collapses the information flow, reduces the administrative burden and reduces error. All of these add up to lower costs, improved cash flow and a rapid return on investment.

#### Collaborative Gain

The system aids collaborative working between planners, the traffic desk, customer services and accounts. The automated and audit quality control of documentation from order receipt through POD to invoicing brings efficiency benefits and dramatically improved management information. The ability to incorporate integrated legacy system optimised traffic plans makes improved returns from existing IT investment.

#### Staff Skills Focus

The reduction in staff administration and the provision of revenue, cost and margin information at the point of decision making enables staff to focus on core skills and take on real accountability.

#### User Configured Model

Because your business is quite different from any other the VLBM system allows you to configure the business model to exactly match the way you are organised and do business. The automation of information flows improves interdepartmental effectiveness minimises error and improves cashflow.

#### Seamless Integration

Designed to Integrate with WMS and ERP demand feeds, Workshop Systems, In-cab monitoring and accounting, the system has its own invoicing and sub-contractor purchasing functions.
